

Location Management > View Locations > Details > History

History and Audit

1. In the location's detailed view, providing a comprehensive overview click the "History" tab to view changes made to the location over time. This tab provides an audit trail of all modifications to the location record.

2. Track prior requests, sublocation additions, and other modifications. This feature is useful for troubleshooting issues and understanding the evolution of the location's configuration.

3. Click the "Audit" tab to access audit capabilities for the location. This tab provides detailed audit logs related to the location, including user actions and system events.
